

RODRINK WATER TANK ADVANTAGES

- ♻️ **Fast and simple installation into ground**
- ♻️ Adjustable extension to match terrain requirements
- ♻️ **Long life service**
- ♻️ Easy manipulation on the construction site
- ♻️ **Production of pipe inlet and outlet connections based on the project**
- ♻️ Suitable for collecting and storage of drinking water
- ♻️ **Slovenian product**

Product description

RoDrink water tanks are used for collecting and storage of drinking water. A various inlet and outlet pipe diameters can be arranged on the tank.

The tank enables the installation of various additional equipment such as: pumps, valve technology, filter systems and level meters.

The tank has been tested in accordance with the relevant standards and normatives for collecting and storage of drinking water.

Technical data RoDrink 55.000 L

Technical data	Volume	Dimensions [L x D x H]	Material	UV resistant material	Drinking water suitability	Inflow/Outflow pipe
Unit	[L]	[mm]	[/]	[/]	[/]	[/]
Values	55.000	11500 x 2425 x 2620 – 3000	PE Dowlex 2432	Yes	Yes	According to the project

Water tank installation

Installation of the tank is fast and simple. Excavate the pit, install the tank and fill the pit with the gravel and tank with water at the same time. Connect it to the inflow and the outflow pipes (various standard pipes possible). Tank can be installed under supervision of Roto experts. Installation must be made according general instructions accessed on the QR code.

Instructions for installation
